Prevention of High Blood Pressure Jan 15 2021 Hypertension, a slow progressive killer disease is a major public health problem. World Health Organization predicts that if there are no interventions by 2020, three quarters of deaths in Africa would be attributable to hypertension. Nurses have recognized role in providing patient education and so, are credible source of health information. Thus, it becomes imperative to assess nurses' knowledge and attitude toward hypertension, since they can help in reducing the prevalence of hypertension by influencing communities to adopt healthy lifestyle. Chapter One provides the study background, objectives and significance of study. Chapter Two discusses epidemiology of hypertension and reviews varied roles of nurses in caring for hypertensives. The theoretical framework, applications and hypotheses were stated in this chapter. Chapter Three gives the research methods and procedures adopted during the study. Chapter Four presents results with their statistical interpretations. Chapter Five examines the rationale and implications of the research observations. The vade mecum is appropriate for student and practicing nurses, health care providers, teachers in the field and allied professions.

Construction and Initial Validation of a Sexual Health Knowledge, Attitudes, and Behavior Survey for College Students Mar 17 2021 This study offers an in-depth investigation into the development of an online, sexual health survey for college students. Within this study the focus areas were limited to three components: (1) sexual knowledge, (2) sexual attitudes, and (3) sexual behavior. Sexual health topics examined within these components included: sexually transmitted diseases, rape susceptibility, alcohol and sexuality, contraceptive methods, and emergency contraception. Within this study psychometric properties of test items and internal consistency of the instrument were examined. Second, multiple correlational analyses were conducted with an established external criterion. Third, the factorial structure of the instrument was investigated. Finally, a follow-up verification of the construct validity was conducted on the final survey instrument. The results of this study identified a five-factor structure with reliability coefficients of 0.74 to 0.91. Convergent and divergent evidence was provided at the item level and the factor level. Based on these results, the final survey contained 24 knowledge items, 48 attitude items, 33 behavior items, 9 demographic items, and 13 social desirability scale items for a total of 127 items.

Identifying Future Disease Hot Spots Mar 29 2022 The Infectious Disease Vulnerability Index is intended to inform actions for preparedness and response to infectious disease outbreaks and foster greater resiliency of national health systems worldwide.

COVID-19, Education, and Literacy in Malaysia May 31 2022 Part of a mini series of Focus books on COVID-19 in Malaysia, the chapters in this book address the pandemic's impacts on education and literacy. Covering a range of teaching and learning challenges impacting learners and teachers, the contributors highlight the pervasiveness of the pandemic on Malaysian society and how Malaysians have found ways to cope. They focus mainly on students' COVID-19 narratives, digital and health literacy issues, language and new vocabulary. This is an opportunity to witness how researchers from multiple disciplines can join forces during challenging times. There are a

great many lessons to be learned from the successes and failures in responding to the pandemic and the measures that have been necessary to contain it. A fascinating read for scholars and educators with an interest in crisis management in non-Western contexts, especially those with a particular interest in Malaysia, or Southeast Asia more generally.

Infectious Disease Surveillance Feb 13 2021 This fully updated edition of Infectious Disease Surveillance is for frontline public health practitioners, epidemiologists, and clinical microbiologists who are engaged in communicable disease control. It is also a foundational text for trainees in public health, applied epidemiology, postgraduate medicine and nursing programs. The second edition portrays both the conceptual framework and practical aspects of infectious disease surveillance. It is a comprehensive resource designed to improve the tracking of infectious diseases and to serve as a starting point in the development of new surveillance systems. Infectious Disease Surveillance includes over 45 chapters from over 100 contributors, and topics organized into six sections based on major themes. Section One highlights the critical role surveillance plays in public health and it provides an overview of the current International Health Regulations (2005) in addition to successes and challenges in infectious disease eradication. Section Two describes surveillance systems based on program areas such as foodborne illnesses, vector-borne diseases, sexually transmitted diseases, viral hepatitis, healthcare and transplantation associated infections. Attention is devoted to programs for monitoring unexplained deaths, agents of bioterrorism, mass gatherings, and disease associated with international travel. Sections Three and Four explore the uses of the Internet and wireless technologies to advance infectious disease surveillance in various settings with emphasis on best practices based on deployed systems. They also address molecular laboratory methods, and statistical and geospatial analysis, and evaluation of systems for early epidemic detection. Sections Five and Six discuss legal and ethical considerations, communication strategies and applied epidemiology-training programs. The rest of the chapters offer public-private partnerships, as well lessons from the 2009-2010 H1N1 influenza pandemic and future directions for infectious disease surveillance.

Oral Health Care Apr 29 2022 Oral health care in pediatric dentistry deals with complete oral health, including preventive aspects for children right from their conception to adolescence, encompassing all the spheres of dentistry including various specialties. It also includes planning a preventive program at individual and community levels. The current research interests in oral health care include studies regarding the role of stem cells, tissue culture, and other ground-breaking technologies available to the scientific community in addition to traditional fields such as anatomy, physiology, and pharmaceuticals etc of the oral cavity. Public health and epidemiology in oral health care is about the monitoring of the general oral health of a community, general afflictions they are suffering from, and an overall approach for care and correction of the same. The oral health care-giver undertakes evaluation of conditions affecting individuals for infections, developmental anomalies, habits, etc. and provides corrective action in clinical conditions. The present work is a compendium of articles

by internationally renowned and reputed specialists about the current developments in various fields of oral health care.

The Health Workforce in Ethiopia Aug 02 2022 Although Ethiopia has made steady progress in health outcomes over the past 10 years, some health challenges remain, particularly those related to maternal health. In part this may be linked to the insufficient number of health professionals providing maternal care services, particularly in the rural parts of the country.

12 Rules for Life Sep 30 2019 #1 NATIONAL BESTSELLER #1 INTERNATIONAL BESTSELLER What does everyone in the modern world need to know? Renowned psychologist Jordan B. Peterson's answer to this most difficult of questions uniquely combines the hard-won truths of ancient tradition with the stunning revelations of cutting-edge scientific research. Humorous, surprising and informative, Dr. Peterson tells us why skateboarding boys and girls must be left alone, what terrible fate awaits those who criticize too easily, and why you should always pet a cat when you meet one on the street. What does the nervous system of the lowly lobster have to tell us about standing up straight (with our shoulders back) and about success in life? Why did ancient Egyptians worship the capacity to pay careful attention as the highest of gods? What dreadful paths do people tread when they become resentful, arrogant and vengeful? Dr. Peterson journeys broadly, discussing discipline, freedom, adventure and responsibility, distilling the world's wisdom into 12 practical and profound rules for life. 12 Rules for Life shatters the modern commonplaces of science, faith and human nature, while transforming and ennobling the mind and spirit of its readers.

Knowledge, Attitudes and Practices of US-based Registered Dietitians Regarding Vitamin D as a Key Nutrient in Public Health Sep 03 2022 The purpose of this study was to determine the knowledge, attitude and behavior influences of Registered Dietitians (RDNs) regarding Vitamin D (VD). An electronic questionnaire served as the data collection tool developed using previously validated questions and supplemented with behavior construct questions. Content and face validity was assessed by an expert panel; internal consistency was assessed using Cronbach's Alpha. Scores were assessed for knowledge to determine dietitian awareness and competency about VD, attitudes of RDNs regarding importance and practices around VD, and influences on RDN behavior including by other healthcare providers (HCP).

Relationships between scales for knowledge, attitude and behavior were examined including the impact of demographic factors on scores. Data was collected from 541 subjects providing informed consent. RDNs were predominantly female, 92%, with good general knowledge of VD (M=84.89, SD=6.71). Regression analysis indicated that increases in age, education and certification inversely impacted behavior scores. Younger RDNs were more influenced in VD behaviors than older RDNs; 42% of RDNs defer to other HCP and 46% defer to lead physician. Dietitians holding Bachelor or Master degrees were more likely to be influenced by others regarding VD practices than dietitians with terminal degrees of PhD or DCN. The results reveal knowledge gaps for the role of VD beyond bone health consistent with high reliance on professional guidelines using evidenced based recommendations from bone health research.

Knowledge, Attitude and Practice (KAP) of Women towards Female Genital Mutilation Aug 29 2019 Master's Thesis from the year 2017 in the subject Women Studies / Gender Studies, Hawassa University, language: English, abstract: Female Genital Mutilation (FGM) is recognized internationally as a violation of human rights of girls and women constituting an extreme form of gender discrimination with documented health consequences. The aim of this study was to assess knowledge, attitude and practice of women towards FGM practice. A community based cross-sectional study design was applied. Both quantitative and qualitative were employed. A total of 278 women at reproductive age (15-49) were sampled for the study from six randomly selected kebeles of Angacha woreda. The survey data was analyzed by SPSS soft ware version 20. Descriptive statistics such as mean, percentage and frequency were used for analyzing data. Binary Logistic Regression Model was used to analyze determinant Associated Factors regarding FGM. In addition

qualitative data were analyzed thematically and the result was presented in narration. The result showed that 55.4% of women had good knowledge about FGM practice however 44.6% had poor knowledge. The majority of the women (50.4%) had negative attitude while 49.6% of them had positive attitude towards FGM practice. Tradition and fear of marriage were the major reasons for the continuation of this practice. From study participants 92.4% of responded that FGM was being practiced in their community and 77.7% of participants were undergone themselves. This study revealed that 79.5% of women were encountered physical health problems related to FGM and 59.7% of women were encountered psychological and sexual problems related to FGM. Bivariate and Multivariate analyses were carried out to identify determinant factors of practice. Age, family income, knowledge and attitude were significantly associated factors for FGM practice. Biopsychosocial Perspectives and Practices for Addressing Communicable and Non-Communicable Diseases Aug 10 2020 While there are a number of clinical practices for treating a variety of diseases, there is an urgent need to integrate bio-psycho-social perspectives and practices in order to promote comprehensive healthcare. Current research reports that diseases such as HIV/AIDS, malaria, diabetes, cardiovascular diseases, and heart diseases are a growing threat to the health and quality of life of individuals across the globe. Considering that nearly all these diseases are directly related to the lifestyle of an individual, prevention and intervention should be devised to address psychological, emotional, social, and spiritual factors. Biopsychosocial Perspectives and Practices for Addressing Communicable and Non-Communicable Diseases is a collection of theoretical research that promotes good health and quality of life through psychosocial interventions to address psychosocial problems facing individuals such as discrimination and stigma, stress, depression, alcohol and drug abuse, smoking, lack of physical activity, and many other socio-economic factors. While highlighting topics including mental health, traditional healthcare, and global health, this book is ideally designed for therapists, counselors, psychologists, medical professionals, hospital administrators, researchers, academicians, and students in fields that include public health, nursing, community-based healthcare, health psychology, HIV/AIDS education, human movement education, and sport psychology.

Oral Health Knowledge, Attitude and Practice Among School Children 2022 Oral health is one of the most overlooked areas of health in Ethiopia. The fact that very few researches were conducted in this area is a reflection of this neglect. This study is a humble contribution to the Dental Health advancement of Ethiopia while it explores the knowledge, attitude and practice of school children as crucial parts of oral health. This quantitative study was conducted in two schools using a self-administered, structured questionnaire among 182 students who were randomly selected with stratified probability sampling technique. The study identified significant relationship of age, sex, socioeconomic status, and school type with oral health knowledge, attitude and practice of school children. It also proposes decisive measures that should be taken in family, school and health professional levels to ameliorate the oral health of school children in Ethiopia.

The Impact of Knowledge, Attitude and Social Norm Changes on Cigarette

Smoking Behavior in the United States May 19 2021 Seminar paper from the year 2018 in the subject Medicine - Public Health, grade: 1.6, Egerton University, language: English, abstract: In the United States cigarette smoking among youth and young adults is a prominent public health issue/concern. On this note, health compromising consequences has prompted many schools of thought and government agencies to set up programs that support smoking cessation in the United States. Cigarette smoking is a health compromising behavior because current statistics in the country show that it has resulted into approximately 443,000 premature deaths amongst youth and adults. Therefore, seminar paper discusses the impact of knowledge, attitude, and social norm changes on cigarette smoking behaviors in the United States.

Ward Ethics Oct 24 2021 The existing literature in medical ethics does not serve the practical needs of medical students and trainees very well, as the dilemmas posed are generally beyond their direct control, and being a student or junior doctor brings its own set of ethical concerns. The editors have addressed this need by compiling a series of case studies from around the world and inviting an international team of leading ethicists and clinicians to comment on them. Over 80 actual cases cover the range of possible problems a medical trainee may encounter on the ward, from drug and alcohol abuse, whistleblowing and improper sexual conduct to performing procedures, handling authority, disclosure, blaming, personal responses to patients, and misrepresentation of research. The book will be an essential guide on how to cope with the ethical dilemmas of those embarking on medical careers.

Missing Microbes Oct 31 2019 A critically important and startling look at the harmful effects of overusing antibiotics, from the field's leading expert Tracing one scientist's journey toward understanding the crucial importance of the microbiome, this revolutionary book will take readers to the forefront of trail-blazing research while revealing the damage that overuse of antibiotics is doing to our health: contributing to the rise of obesity, asthma, diabetes, and certain forms of cancer. In Missing Microbes, Dr. Martin Blaser invites us into the wilds of the human microbiome where for hundreds of thousands of years bacterial and human cells have existed in a peaceful symbiosis that is responsible for the health and equilibrium of our body. Now, this invisible eden is being irrevocably damaged by some of our most revered medical advances—antibiotics—threatening the extinction of our irreplaceable microbes with terrible health consequences. Taking us into both the lab and deep into the fields where these troubling effects can be witnessed firsthand, Blaser not only provides cutting edge evidence for the adverse effects of antibiotics, he tells us what we can do to avoid even more catastrophic health problems in the future.

Bystander CPR May 07 2020 Background: It has been proved that bystander cardiopulmonary resuscitation (CPR) saves lives; however, which training method in CPR is most instructive and whether survival is affected by the training level of the bystander have not yet been fully described. Aim: To identify the factors that may affect 7th grade students' acquisition of CPR

skills during CPR training and their willingness to act, and to describe 30-day survival from out-of-hospital cardiac arrest (OHCA) after bystander CPR and the actions performed by laymen versus off-duty medically educated personnel. Methods: Studies I–III investigate a CPR training intervention given to students in 7th grade during 2013–2014. The classes were randomized to the main intervention: the mobile phone application (app) or DVD-based training. Some of the classes were randomized to one or several additional interventions: a practical test with feedback, reflection, a web course, a visit from elite athletes and automated external defibrillator (AED) training. The students' practical skills, willingness to act and knowledge of stroke symptoms, symptoms of acute myocardial infarction (AMI) and lifestyle factors were assessed directly after training and at 6 months using the Laerdal PC SkillReporting system (and entered into a modified version of the Cardiff test scoring sheet) and a questionnaire. The Cardiff test resulted in a total score of 12–48 points, and the questionnaire resulted in a total score of 0–7 points for stroke symptoms, 0–9 points for symptoms of AMI and 0–6 points on lifestyle factors. Study IV is based on retrospective data from the national quality register, the Swedish registry of cardiopulmonary resuscitation, 2010–2014. Results: A total of 1339 students were included in the CPR training intervention. The DVD-based group was superior to the app-based group in CPR skills, with a total score of 35 (SD 4.0) vs 33 (SD 4.2) points directly after training (p
