*Treating Opioid Use Disorder in General*

*Medical Settings* Nov 04 2022 This book is an invaluable reference for medical practitioners seeking to integrate opioid use disorder (OUD) treatment into general medical settings, including primary care, the inpatient hospital, and the emergency department. It recognizes opioid-related deaths in the United States as a significant public health crisis and fills the gap in drug use and addiction treatment knowledge for care providers. Timely and concise, opening chapters examine the history of OUD pharmacology and treatment, as well as the principles of care and treatment. Subsequent chapters analyze the shortcomings of current approaches to opioid addiction, including the high cost and low value of acute care delivered by minimally trained providers and the fixation on short-term detoxification and rehab. The book offers specific guidance for practical integration of effective opioid use disorder treatment into a range of healthcare settings. Chapters also discuss the unique complexities of caring for special populations with OUD, such as pregnant people and those involved in the criminal legal system. The book concludes with personal experience from individuals with a history of OUD. Socially conscious and practical, *Treating Opioid Use Disorder in General Medical Settings* serves as a crucial evidence-based resource for physicians, nurse practitioners, physician assistants, nurses, and other healthcare professionals.

Quality of Care for General Medical Conditions

May 06 2020 This report is one of five volumes providing detailed information on the QA Tools, RAND's comprehensive, clinically based system for assessing quality of care for children and adults. The QA Tools indicators encompass screening, diagnosis, treatment, and follow-up in 46 clinical areas and cover a variety of modes of providing care, including history, physical examination, laboratory study, medication, and other interventions and contacts. Development of each indicator was based on the ratings of a panel of experts in the relevant fields and on a focused review of the scientific literature, which is clearly documented for each clinical condition. This volume focuses on indicators for care of general medical conditions. Each chapter summarizes the results of the literature review for a particular condition, provides RAND staff's recommended indicators based on that review, and notes the level of scientific evidence supporting each indicator along with the relevant citations. In addition, this work details the process by which the expert panel evaluated the indicators and the final disposition of each indicator. Clinical conditions covered in this volume are: Acne, alcohol dependence, allergic rhinitis, benign prostatic hyperplasia, cataracts, cholelithiasis, dementia, depression, diabetes mellitus, hormone replacement therapy, headache, hip fracture, hysterectomy, inguinal hernia, acute low back pain, orthopedic conditions. Other RAND Health titles on the QA Tools system focus on indicators for children and adolescents, oncology and HIV, cardiopulmonary conditions, and women.

*2013 Accountability Hearing with the General Medical Council - HC 897* Nov 23 2021 GMC's fitness to practise successfully produces

outcomes that protect patients from sub-standard doctors but failures to communicate the reasons for decisions and poor investigative practices have undermined a small number on investigations. The GMC should review its fitness to practice procedures to prevent such mistake. The Committee also found that while it is still too early to judge whether revalidation has been effective there is a worrying approach to the oversight of revalidation. Each designated body has a responsible officer for revalidating their medical staff, but the degree to which the responsible officer will be held to account is unclear. It is imperative that the GMC clarifies the personal responsibility and accountability of responsible officers. There is also concern over the number of responsible officers available to oversee the revalidation of doctors working in primary care. GPs are revalidated not by their own employers but by one of the 27 NHS England local area teams that oversees Clinical Commissioning Groups in England. Just 27 responsible officers will be tasked with overseeing revalidation for approximately 45,000 GPs in England. The Government's intention had been to give the GMC the power to allow it to appeal decisions made by the Medical Practitioners Tribunal Service (MPTS) in 2014 by using a mechanism in secondary legislation called a section 60 order. The Government now plans to introduce the reform in primary legislation as part of a

proposed Law Commission Bill thus meeting with even further delay
