Understanding System Change in Child Protection and Welfare Oct 28 2019 This book provides an account of the experience of a multifaceted system-change programme to strengthen the capacity of Ireland ' s statutory child protection and welfare agency in the areas of prevention, early intervention and family support. Many jurisdictions globally are involved in system change processes focused on

increasing investment in services that seek to prevent children's entry into child protection and welfare systems, through early intervention, greater support to families, and an increased emphasis on rights and participation. Based on a four-year in-depth study by a team of University-based researchers, this text adds to the emerging knowledge-base on developing, implementing and evaluating system change in child protection and welfare. Study methodological approaches were wide ranging and involved a number of key stakeholders including children, parents, social workers and social care workers, service managers, agency leaders and policy makers. Since the change process involved an agency-university partnership encompassing design, technical support and evaluation, the book also contributes to understandings of the potential and limits of such partnerships in the child protection and welfare field. Uniquely, the book gives voice to the experience of both agency personnel and academic in the accounts provided. It will be of interest to all scholars, students and practitioners in the areas of child protection and welfare.

You and Your Anxious Child Jul 30 2022 One of the world's foremost experts on anxiety in children provides a guide to recognizing and alleviating a range of debilitating fears. Anxiety affects more children and teens than any other psychiatric illness, but it's also the most treatable emotional disorder. Some 25 percent of children and adolescents will suffer an anxiety disorder at several points in their lifetime, resulting in serious problems in their ability to function in school, with peers, and on a general day-to-day basis. A renowned researcher and clinician who has developed groundbreaking, proven coping strategies illuminates a new path to fear-free living for families. *You and Your Anxious Child* differentiates between separation anxiety, generalized anxiety, and social phobia, and guides parents on when and how to seek intervention. With moving case studies, such as Jon's, whose mother quit her job because his separation anxiety compelled her to stay with him full-time, this book elucidates the nightmare that families can be living, and helps them understand that they are not alone. Every step of the way, Albano illustrates proven therapies to manage anxiety issues in children while addressing the emotional needs of parents, too. *You and Your Anxious Child* brings much-needed hope to families, helping them shape a positive new vision of the future.

Clinical Manual of Child and Adolescent Psychopharmacology Aug 26 2019 The new, third edition of the *Clinical Manual of Child and Adolescent Psychopharmacology* has been thoroughly revised, yet its mission remains the same: to keep clinicians up-to-date on the latest research so that they can provide state-of-the-art care to their young patients. To this end, the book describes and explores those elements that are specific to pediatric psychopharmacology; this defines and positions the volume at the nexus of child and adolescent psychiatry, pediatrics, and pharmacology. A stellar roster of contributors addresses new treatments for youths with disruptive behavior disorders, mood disorders,

anxiety disorders, pervasive developmental disorders, and psychotic illnesses and tackles some of the most important emerging issues in the field. For example, advances in understanding the long-term treatment effects of medications in pediatric populations are thoroughly reviewed, including not only maintenance studies that consider the durability of efficacy but also clinical trials of greater duration designed to specifically evaluate long-term safety. In addition, recent studies of combination therapies are examined, helping clinicians better understand how to treat the complicated patients that arrive every day at a prescribing clinician's office. Finally, because research designs now include a broader base of patient populations to make the data more applicable to everyday clinical practice, the book focuses on head-to-head studies with multiple active comparators. The book offers clinicians comprehensive, accessible information and boasts a multitude of helpful features: The book is organized by diagnosis instead of agent class. This makes it a true clinical desktop reference that allows clinicians to quickly and efficiently search treatment options and the evidence base on a case-by-case basis. DSM-5 criteria and information on comorbidities are also included. The American Academy of Child and Adolescent Psychiatry Practice Parameters are integrated into the discussion, where applicable, in support of standard of care. The book has been updated to include the latest research at the time of publication. A new chapter has been added to address eating disorders, an area where psychopharmacological research that may apply to children and adolescents is now being pursued. Useful features to help the reader understand and retain the material include clinical summary points, easy to read tables, and current and carefully vetted references. The Clinical Manual of Child and Adolescent Psychopharmacology, Third Edition, is an indispensable guide to the substantive research that has been done in nearly every area of pediatric psychopharmacology, as well as the major improvements that have been made to the evidence-based practice of treating youths with psychiatric illness.

Poor executive function (EF) in the brain can mean behavioral and attentional problems in school. Response inhibition – inhibiting actions that interfere with our intentions or goals. Shifting focus – interrupting an ongoing response in order to direct attention to other aspects of a situation that are important for goal attainment. Cognitive flexibility – generating alternative methods of solving a problem or reaching a goal. Self-monitoring – checking on one's own cognitions and actions to assure that they are in line with one's intentions. Goal Orientation – creating and carrying out a multi-step plan for achieving a goal in a timely fashion, keeping the "big picture" in mind.

December's Child May 28 2022 As Reviewed by Eugene N. Anderson, University of California, Riverside in *The Journal of California Anthropology*, Vol. 2, No. 2 (WINTER 1975), pp. 241-244: A child born in December is "like a baby in an ecstatic condition, but he leaves this condition" (p. 102). The Chumash, reduced by the 20th century from one of the richest and most populous groups in California to a pitiful remnant, had almost lost their strange and ecstatic mental world by the time John Peabody Harrington set out to collect what was still remembered of their language and oral literature. Working with a handful of ancient informants, Harrington recorded all he could--then, in bitter rejection of the world, kept it hidden and unpublished. After his death there began a great quest for his scattered notes, and these notes are now being published at last. Thomas Blackburn, among the first and most assiduous of the seekers through Harrington's materials, has published her the main body of oral literature that Harrington collected from the Chumash of Santa Barbara and Ventura Counties. Blackburn has done much more: he has added to the 111 stories a commentary and analysis, almost book-length in its own right, and a glossary of the Chumash and Californian-Spanish terms that Harrington was prone to leave untranslated in the texts.

The Outside Child, In and Out of the Book Aug 19 2021 The Outside Child, In and Out of the Book is situated at the intersection between children's literature studies and childhood studies. In this provocative book, Christine Wilkie-Stibbs juxtaposes the narratives of literary and actual children/young adults to explore how Western culture has imagined, defined, and dealt with their outsider status – whether orphaned, homeless, refugee, victims of abuse, or exploited – and how processes of economic, social, or political impoverishment are sustained and naturalized in regimes of power, authority, and domination. In five chapters titled: "Outsider," "Displaced," "Erased," "Abject," "Unattached," and "Colonized," the book situates and repositions a range of pre- and post-millennium children's/young adult fictions, autobiographies, policy documents, and reports in the current climate of rabid globalization, new "out-group" definitions, and prescribed normativity. Children's/young adult fictions considered include: Malorie Blackman's Noughts and Crosses trilogy; Mark Haddon's The Curious Incident of the Dog in the Night-Time; Jacqueline Wilson's The Illustrated Mum; Shyam Selvadurai's Funny Boy; Ann Provoost's Falling; Meg Rosoff's, How I Live Now; Elizabeth Laird's A Little Piece of Ground. Model Programs in Child and Family Mental Health Apr 14 2021 This volume is the product of a combined effort to find programs of service delivery that demonstrably treat the varieties of mental health problems of children and their families. The Section on Clinical Child Psychology (APA, Clinical Psychology Section I) and the Division of Child, Youth, and Family Services (APA, Division 37) established a task force whose mission was to identify, provide recognition for, and disseminate information on such programs. Their findings are presented here. The opening chapter and each section overview chapter provide orientations to the program descriptions and examine characteristics of exemplary interventions. The targeted problems include: child abuse and neglect, school adjustment problems, social problem-solving problems, autism and developmental disabilities, conduct disorders and severe emotional problems, children affected by disasters and trauma, children whose parents are divorced, children of teenage parents, family dysfunction and parent-child relationships, oppositional defiant disorder, and attention deficit disorder. Settings for interventions in the model programs include: schools, mental health centers and family guidance clinics, hospitals and pediatric practices, group homes and sheltered workshops, community centers, family homes, summer camps, and coordinated systems of care. The 18 programs described demonstrate the rationale for their interventions, their targeted populations, the type of staff and personnel, various programmatic interventions, aspects of the problems, implementation of interventions, and how the programs have been evaluated. Transforming the Workforce for Children Birth Through Age 8 May 16 2021 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and

competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.
