**Death Star Manual** Mar 17 2021 The Death Star is a spherical space station, the size of a small moon, highly armoured and armed to destroy anything from enemy spaceships to whole planets. Using cutaway drawings, exploded diagrams and photographs, backed by detailed technical specifications and descriptions of the onboard systems, this owner's manual reveals the technology contained within and lays bare the awesome power (and weaknesses) of the Empire's ultimate weapon.

**Star Wars: Rebel Starfighters** Mar 05 2020 After the Clone Wars, the Galactic Empire spared no expense to build a massive fleet of warships to enforce Imperial rule, intimidate defenseless worlds, and destroy all opposition. However, the Imperial Navy underestimated Rebel Alliance fighter pilots, who flew X-wing, Y-wing, A-wing, U-wing and B-wing starfighters, and whatever else they could obtain to fight their Imperial enemies. Decades later, Resistance pilots would fly next-generation versions of Rebel starfighters against the First Order. The Rebel Starfighters Owners' Workshop Manual presents a thorough history of the starfighters that served the Rebel Alliance and the Resistance. The history includes design origins, production, and modifications for each Rebel starfighter, and is fully illustrated with numerous photographs, schematics, exploded diagrams, and computer-generated artwork by Star Wars vehicle experts Chris Reiff and Chris Trevas. Text is by Ryder Windham, author and co-author of more than 70 Star Wars books. This Haynes Manual is the most thorough technical guide to Rebel starfighters available, and is fully authorized and approved by Lucasfilm.

*Aircraft of The Royal Australian Air Force* May 19 2021 Aircraft of The Royal Australian Air Force tells the story of the RAAF's first one hundred years by describing the acquisition, operation, and service record of the multitude

of aircraft types flown by the RAAF. The 176 aircraft types include the flimsy wood and canvas aircraft typical of World War I, through the technological advances during and after World War II, to modern fifth-generation, complex aircraft like the F-35 Lightning II. Even before its formation Sir Richard Williams, the Father of the RAAF, had decided to employ an alpha-numeric numbering system to identify and account for each aircraft in service. This system started with A1, A2, A3 etc as each type of aircraft came into service. Each individual aircraft within each series was identified as A1-1, A1-2 and so on and the aircraft serial became known colloquially as the 'A-number'. With some exceptions over the century since the A-number system started, aircraft entered RAAF service in broadly the sequence of the A-numbers, and so this book is intended to assist in charting the 100-year history of the RAAF by listing aircraft operated in A-number sequence, rather than by listing them by role (such as Fighter, Bomber, Maritime, Trainer, Transport etc) or alphabetically by name or by manufacturer. The inclusion of a comprehensive Index and the Quick Reference Guide to aircraft by role is intended to facilitate the location of the entry for any specific type of aircraft for those who may not already know its A-number. Aircraft of The Royal Australian Air Force is a must have for all those who have served in the RAAF, those with a passion for military aviation and aircraft in general, and the broader members of the public wishing to gain an appreciation of the Royal Australian Air Force in its centenary year.

**Astronaut** May 07 2020 The book begins with early ideas about astronauts in science fiction and film portrayals of the role. It goes on to cover recruitment and the application process to become an astronaut with NASA and ESA, and the qualifications and fitness required for various astronaut roles. The reader is taken through training for different types of astronaut roles (pilot, scientist, payload specialist, space walker, Moon walker, etc) and the different types of missions are described (sub-orbital, Earth orbit, living aboard the International Space Station (ISS), lunar flight and landing, driving on the Moon, and planned future missions to asteroids and Mars). The equipment used by astronauts is documented, including clothing, space suits, tools, backpacks, zero-gravity toilets, food stations, etc. The experience of space flight on typical missions is outlined, illustrated by the accounts of real astronauts on actual flights – the experience of launch, first reactions to Zero-G, exiting the hatch for a spacewalk, the views of Earth, walking on the Moon, and re-entering the Earth's atmosphere. The book is written in a style accessible to the layperson, while including sufficient technical details to satisfy more knowledgeable readers. It also captures the excitement and wonder of spaceflight, making extensive use of astronaut biographies and interviews to uncover the real human experience, as much as technical information to provide detail to satisfy those curious about 'how it works'.
