Manual of Pediatric Neurology Apr 28 2022

Manual of Pediatric Neurology is an easy-to-read and easy-to-access text based on clinical scenarios. Emphasis is placed on signs and symptoms, diagnostic tests as needed, and practical advice on treatment for childhood neurologic disorders. The book comprises a collection of chapters that address frequently encountered pediatric scenarios in all clinical settings. These include the management of seizures in the emergency department, treatment of epilepsy in the outpatient setting, acute management of headaches and many more. The book also covers topics juxtaposed to neurology such as neonatal neurology, neurogenetics, and the management of stroke in children. Special attention is placed on commonly encountered neurological conditions such as Tourette' syndrome, neuromuscular illnesses, and CNS infections. Interpretation of frequently used tests such as EEG, CSF analysis, and nerve conduction testing is also covered. Finally, one chapter is devoted to the

care of child neurology patients at the end of life, i.e. palliative care.

**Self-Perpetuating Structural States in Biology, Disease, and Genetics** Oct 30 2019

Over the past half-century, the central dogma, in which DNA makes RNA makes protein, has dominated thinking in biology, with continuing refinements in understanding of DNA inheritance, gene expression, and macromolecular interactions. However, we have also witnessed the elucidation of epigenetic phenomena that violate conventional notions of inheritance. Protein-only inheritance involves the transmission of phenotypes by self-perpetuating changes in protein conformation. Proteins that constitute chromatin can also transmit heritable information, for example, via posttranslational modifications of histones. Both the transmission of phenotypes via the formation of protein conformations and the inheritance of chromatin states involve self-perpetuating assemblies of proteins, and there is evidence for some common structural features and conceptual frameworks between them. To foster interactions between researchers in these two fields, the National

Academy of Sciences convened an Arthur M.Sackler Colloquium entitled "Self-Perpetuating Structural States in Biology, Disease, and Genetics" in Washington, DC, on March 22-24, 2002. Participants described new phenomenology and provided insights into fundamental mechanisms of protein and chromatin inheritance. Perhaps most surprising to attendees was emerging evidence that these unconventional modes of inheritance may be common.
