Power Shovels : The World's Mightiest Mining and Construction Excavators Jul 09 2020 Power Shovels is a celebration of the land leviathans that have inhabited the open pit mines over the past century. Due to their massive size and unbelievable capabilities, interest in these machines extends far beyond their role in the

extraction of minerals and precious metals. Author Orlemann focuses on the super stripper and loading class of shovels. Discover how the super stripper can remove vast amounts of earth and place it over a football field away. This book reveals design, engineering, manufacture, assembly, and operation of these modern and massive shovels.

DIY Home Building and Remodeling Oct 24 2021 What people need most is encouragement with a rational approach to a large project. With this information, first timers can grab hold of a tested method for implementing their project. The problem with being led by professional contractors is that they quickly forget their learning curve. After coming up through the ranks of construction teams, they really don't make as many mistakes as the amateur. The details of their learning process, once laid to paper, have been refined, with the potential pitfalls removed. They do not describe the possible failure outcomes of the procedures. I don't believe it's intentional, It's just humane nature. Skilled craftsman take for granted the skills they learned when completing a task that, to them, has become second-nature.

Giant Earthmovers : An Illustrated History May 31 2022 A comprehensive review of earthmoving and construction equipment from the birth of primitive industrial tools to today's awe-inspiring machines! The biggest haulers, dozers, scrapers and unusual specialty equipment in the field are presented here in over 500 black-and-white photographs. The author's expertly written text details machine categories and discusses the history, evolution, design and manufacture of these industry giants. Packed full of top-quality archival photographs, most taken from manufacturer archives.

Engineering Tools for Environmental Risk Management Aug 29 2019 The four volumes of the book series "Engineering Tools for Environmental Risk Management" deal with environmental management, assessment & monitoring tools, environmental toxicology and risk reduction technologies. This last volume focuses on engineering solutions usually needed for industrial contaminated sites, where nature's self-remediation is inefficient or too slow. The success of remediation depends on the selection of an increasing number of conventional and innovative methods. This volume classifies the remedial technologies and describes the reactor approach to understand and manage in situ technologies similarly to reactor-based technologies. Technology types include physicochemical, biological or ecological solutions, where near-natural, sustainable remediation has priority. A special chapter is devoted to natural attenuation, where natural changes can help achieve clean-up objectives. Natural attenuation and biological and ecological remediation establish a serial range of technologies from monitoring only to fully controlled interventions, using ' just' the natural ecosystem or sophisticated artificial living systems. Passive artificial ecosystems and biodegradation-based remediation - in addition to natural

attenuation - demonstrate the use of these 'green' technologies and how engineering intervention should be kept at a minimum to limit damage to the environment and create a harmonious ecosystem. Remediation of sites contaminated with organic substances is analyzed in detail including biological and physicochemical methods. Comprehensive management of pollution by inorganic contaminants from the mining industry, leaching and bioleaching and acid mine drainage is studied in general and specifically in the case of an abandoned mine in Hungary where the innovative technology of combined chemical and phytostabilization has been applied. The series of technologies is completed by electrochemical remediation and nanotechnologies. Monitoring, verification and sustainability analysis of remediation provide a comprehensive overview of the management aspect of environmental risk reduction by remediation. This book series focuses on the state of knowledge about the environment and its conscious and structured application in environmental engineering, management and decision making.

Group Decision and Negotiation: Methodological and Practical Issues Oct 04 2022
This book constitutes the refereed proceedings of the 22nd International Conference on Group Decision and Negotiation, GDN 2022, which was held virtually during June 12-16, 2022. The field of Group Decision and Negotiation focuses on decision processes with at least two participants and a common goal but conflicting individual goals. Research areas of Group Decision and Negotiation include electronic negotiations, experiments, the role of emotions in group decision and negotiations, preference elicitation and decision support for group decisions and negotiations, and conflict resolution principles. This year's conference focusses on methodological and practical issues. The 9 full papers presented in this volume were carefully reviewed and selected from 68 submissions. They were organized in the following topical sections: Preference modeling for group decision and negotiation; conflict resolution; collaborative decision making processes.

Irishness and Womanhood in Nineteenth-century British Writing Jul 29 2019

Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.
