**Accelerating Human Evolution by  
Theosophical Initiation** Feb 01 2020 The main  
subjects of analysis in the present book are the  
stages of initiation in the grand scheme of

Theosophical evolution. These initiatory steps are connected to an idea of evolutionary self-development by means of a set of virtues that are relative to the individual's position on the path of evolution. The central thesis is that these stages were translated from the "Hindu" tradition to the "Theosophical" tradition through multifaceted "hybridization processes" in which several Indian members of the Theosophical Society partook. Starting with Annie Besant's early Theosophy, the stages of initiation are traced through Blavatsky's work to Manilal Dvivedi and T. Subba Row, both Indian members of the Theosophical Society, and then on to the Sanâtana Dharma Text Books. In 1898, the English Theosophist Annie Besant and the Indian Theosophist Bhagavan Das together founded the Central Hindu College, Benares, which became the nucleus around which the Benares Hindu University was instituted in 1915. In this context the Sanâtana Dharma Text Books were published. Mühlematter shows that the stages of

initiation were the blueprint for Annie Besant's pedagogy, which she implemented in the Central Hindu College in Benares. In doing so, he succeeds in making intelligible how "esoteric" knowledge was transferred to public institutions and how a broader public could be reached as a result. The dissertation has been awarded the ESSWE PhD Thesis prize 2022 by the European Society for the Study of Western Esotericism.

*Pressure Oscillation in Biomedical Diagnostics and Therapy* Oct 23 2021 Complete and comprehensive reference on the principles of diagnostic and therapeutic techniques using pressure oscillation *Pressure Oscillation in Biomedical Diagnostics and Therapy* presents

key findings in imaging, diagnostics, and therapies using high and low frequency pressure waves in a concise and easy-to-understand way, focusing primarily on the cardiovascular and pulmonary systems that utilize acoustics (mechanical wave motion). The work provides basic background in relevant acoustic theory as well as specific technical information associated with modern medical applications. Low frequency acoustics (pressure oscillation) and some aspects of ultrasound (radiation force) are also reviewed. The principles in the work can be extended to include other areas relating to materials and metal diagnostics. To allow for maximum reader comprehension regardless of current expertise on the subject, each chapter includes a brief history, current developments, and practical applications of the topic covered within. Furthermore, all chapters are based on engineering and physiological principles to deliver practical technologies. Sample topics covered in the work include: Fundamental

principles of pressure oscillation (PO), discussing the basic principles of pressure oscillation and how they can be formulated into mathematical equations PO in imaging techniques, discussing the basic principles of converting pressure oscillation to a tool in biomedical imaging Lung mechanics, discussing how each part of the lung is associated with various diseases and how PO can target these parts Asthma, discussing the basic concepts of asthma, the importance of airway smooth muscle (ASM), and dynamic behavior of ASM Pressure Oscillation in Biomedical Diagnostics and Therapy links pressure oscillation (PO) and biomedical diagnostics and therapy for scholars and practitioners. It is an essential resource for all professionals who wish to be on the cutting edge of treating lung diseases such as obstructive sleep apnea, asthma, and respiratory distress syndrome.
