Florida's Climate Sep 30
2019 Florida's climate has been and continues to be one of its most important assets. It has

enabled the growth of many major industries, including tourism and agriculture, which now rank at the top of Florida's diverse economic activities.

Our state's climate enables its native ecosystems to flourish and attract citizens from around the world. The dependencies of Florida's

society and ecosystems on climate are widely recognized and generally taken for granted. However, we now know that climate around the world is changing. Questions arise about whether or not Florida's climate is changing, how rapidly these changes might occur, and how Florida may adapt to anticipated changes and help mitigate the rates of change. This book provides a thorough review of the current state of research on Florida's climate, including physical climate benchmarks; climate prediction, projection, and attribution; and the impacts of climate and climate change on the people and natural resources of Florida.

The editors have gathered more than 90 researchers at universities across the state and beyond to address important topics such as sea level rise, water resources, and how climate affects various sectors, including energy, agriculture, forestry, tourism, and insurance. This volume offers accessible, accurate information for students, policymakers, and the general public. About the Editors: Eric P. Chassignet is a professor in the Department of Earth, Ocean and Atmospheric Science and director of the Center for Ocean-Atmospheric Prediction Studies at Florida State University. James W. Jones is a distinguished

professor emeritus in the Department of Agricultural and Biological Engineering at the University of Florida.

Vasubandhu Misra is an associate professor in the Department of Earth, Ocean and Atmospheric Science and the Center for Ocean-Atmospheric Prediction Studies at Florida State University.

Jayantha Obeysekera is the chief modeler at the South Florida Water Management District. About the Florida Climate Institute: The Florida Climate Institute (FCI) is a multi-disciplinary network of scientists working to achieve a better understanding of climate variability and change. The FCI has ten member universities -
