No. 2356 contains 14 papers that review an intelligent dilemma-zone protection system for a high-speed rural intersection; adaptive signal control in Germany; queue length under connected vehicle technology; a coordinated optimization model for signal timings of full continuous flow intersections; and, transit priority strategies for multiple routes under headway-based operations. This TRR also explores multiregime adaptive signal control for congested urban roadway networks; metered entry volume on an oversaturated network with dynamic signal timing; arterial queue spillback detection and signal control based on connected vehicle technology; a coordinated optimization model for transit priority control under arterial progression; and, a dynamic programming approach for arterial signal optimization. In addition, this issue examines self-organizing control logic for oversaturated arterials; microwave radar vehicle detectors at a signalized intersection under adverse weather conditions; a performance diagnosis tool for arterial traffic signals; and, a statistical study of the impact of adaptive traffic signal control on traffic and transit performance."--Online abstract.

*Hydraulic Engineering II* Aug 22 2021 Hydraulic research is developing beyond traditional civil engineering, since the number of natural hazards increased in recent years, and so did the extent and scope of structural safety assessment and environmental research. *Hydraulic Engineering II* contains 44 technical papers from the 2nd SREE Conference on Hydraulic Engineering (CHE 2013, Hong Kong, 2-3 November 2013, including the Third SREE Workshop on Environment and Safety Engineering, WESE 2013), discusses recent advances and issues, and identifies challenges associated with engineering applications in hydraulic engineering. The contributions showcase recent developments in the areas of hydraulic engineering and environmental engineering, and other related fields. The sections on hydraulic engineering mainly focus on river engineering and sediment

transport, flood hazards and innovative control measures, rainfall modelling, dam safety, slope stability, environmental hydraulics and hydrology, while the contributions related to environmental issues focus on environmental prediction and control techniques in environmental geoscience, environmental ecology, water pollution and ecosystem degradation, applied meteorology, coastal engineering, safety engineering and environmental pollution control. Hydraulic Engineering II will be invaluable to academics and professionals in both hydraulic and environmental engineering.

Statistical Methods in Hydrology Feb 25 2022 The application of statistics in hydrologic engineering is described and illustrated. The subject matter covers the following items: (1) A concise review of the basic concepts of probability and correlation analyses that are applicable in hydrologic engineering, with a guide to supplemental reading for further treatment; (2) Presentation of detailed computation procedures and supporting justifications and computation aids for derivation of probability of frequency estimates based on analysis of hydrologic records that have been adjusted as required to conform with selected reference base conditions; and (3) A summary of procedures for developing 'regionalized' hydrologic frequency estimates, based on analyses of hydrologic records available at stream gaging stations, adjusted to provide generalized flood-frequency relations that are considered most representative of long-period hydrologic characteristics in various drainage areas in the region. Also, illustrations and explanations of simple generalization procedures for use where these are adequate and advantageous are given.

**Information And Complexity** Mar 29 2022 The book is a collection of papers of experts in the fields of information and complexity. Information is a basic structure of the world, while complexity is a fundamental property of systems and processes. There are intrinsic relations between information and complexity. The research in information theory, the theory of complexity and

their interrelations is very active. The book will expand knowledge on information, complexity and their relations representing the most recent and advanced studies and achievements in this area. The goal of the book is to present the topic from different perspectives — mathematical, informational, philosophical, methodological, etc.

*Applied Hydrology* Dec 26 2021 Hydrology is the discipline that focuses on the scientific study of water present on Earth or other planets. It includes the movement, quality and distribution of water on the planets including water resources, water cycle and environmental watershed sustainability. It focuses on analyzing water related problems such as water management, natural disasters, environmental preservation and provide their solutions. Hydrology is sub-divided into groundwater hydrology, surface water hydrology and marine water hydrology. Surface hydrology, hydrometeorology, hydrogeology, drainage basin management and water quality are some of the other domains of hydrology. Water circulation or water cycle is the central aspect of hydrology. It is concerned with how water circulates across the Earth through various pathways. This book unravels the recent studies in the field of hydrology. Different approaches, evaluations, methodologies and advanced studies have been included herein. Those in search of information to further their knowledge will be assisted by this book.

*Hazardous Waste Minimization* Jun 19 2021 Minimizing waste generation offers cost-effective advantages over devising complex disposal treatment plans. Now a leading member of the EPA's Waste Minimization Research Program has assembled the latest ideas for assessing, planning, and implementing waste minimization programs in government and industry alike. Describing successful in-place programs, he demonstrates the compelling economics of waste minimization and discloses

practical methods within most any organizational budget-including improved inventory management, materials substitution, process modifications, plant recycling, and more.

**Theoretical Organic Chemistry** Jan 27 2022 This volume is devoted to the various aspects of theoretical organic chemistry. In the nineteenth century, organic chemistry was primarily an experimental, empirical science. Throughout the twentieth century, the emphasis has been continually shifting to a more theoretical approach. Today, theoretical organic chemistry is a distinct area of research, with strong links to theoretical physical chemistry, quantum chemistry, computational chemistry, and physical organic chemistry. The objective in this volume has been to provide a cross-section of a number of interesting topics in theoretical organic chemistry, starting with a detailed account of the historical development of this discipline and including topics devoted to quantum chemistry, physical properties of organic compounds, their reactivity, their biological activity, and their excited-state properties.
