[Nuclear Nightmares](#) Apr 04 2020 There is a high risk that someone will use, by accident or design, one or more of the 17,000 nuclear weapons in the world today. Many thought such threats ended with the Cold War or that current policies can prevent or contain nuclear disaster. They are dead wrong—these weapons, possessed by states large and small, stable and unstable, remain an ongoing nightmare. Joe Cirincione surveys the best thinking and worst fears of experts specializing in nuclear warfare and assesses the efforts to reduce or eliminate these nuclear dangers. His book offers hope: in the 1960s, twenty-three states had nuclear weapons and research programs; today, only ten states have weapons or are seeking them. More countries have abandoned nuclear weapon programs than have developed them, and global arsenals are just one-quarter of what they were during the Cold War. Yet can these trends continue, or are we on the brink of a new arms race—or worse, nuclear war? A former member of President Obama's nuclear policy team, Cirincione helped shape the policies unveiled in Prague in 2009, and, as president of an organization intent on reducing nuclear threats, he operates at the center of debates on nuclear terrorism, new nuclear nations, and the risks of existing arsenals.

Every Day a Nightmare Jun 18 2021 In December 1941, the War Department sent two transports and a freighter carrying 103 P-40 fighters and their pilots to the Philippines to bolster Gen. Douglas MacArthur's Far East Air Force. They were then diverted to Australia, with new orders to ferry the P-40s to the Philippines from Australia through the Dutch East Indies. But on the same day as the second transport reached its destination on January 12, 1942, the first of the key refueling stops in the East Indies fell to rapidly advancing Japanese forces, resulting in a break in their ferry route and another change in their orders. This time the pilots would fly their aircraft to Java to participate in the desperate Allied defense of that ultimate Japanese objective. Except for the pilots from the Philippines, almost all of the other pilots eventually assigned to the five provisional pursuit squadrons ordered to Java were recent graduates of flying school with just a few hours on the P-40. Only forty-three of them made it to their assigned destination; the rest suffered accidents in Australia, were shot down over Bali and Darwin, or were lost in the sinking of the USS Langley as it carried thirty-two of them to Java. Even those who did reach the secret field on Java wondered if they had been sacrificed for no purpose. As the Japanese air assault intensified daily, the Allied defense collapsed. Only eleven Japanese aircraft fell to the P-40s. Author William H. Bartsch has pored through personal diaries and memoirs of the participants, cross-checking these primary sources against Japanese aerial combat records of the period and supplementing them with official records and other American, Dutch, and Australian accounts. Bartsch's thorough and meticulous research yields a narrative that situates the Java pursuit pilots' experiences within the context of the overall strategic situation in the early days of the Pacific theater.

Nightmare Pipeline Failures Jun 26 2019 The worst nightmares of the oil and gas pipeline industry are coming true in the United States. High-pressure natural gas pipelines run underground through many suburban areas as part of the network providing fuel to homes and businesses. This infrastructure poses an immense, but insufficiently recognised, threat to the general public. In 2010, one of these pipelines ruptured in San Bruno, a suburb of San Francisco adjacent to the international airport. The result was a massive explosion and fire in which eight people died, many were injured, and 38 homes were destroyed. This possibility haunts many cities around the world. Coincidentally in the same year, another worst-case scenario came true, near Marshall, in the state of Michigan. A pipeline rupture released vast quantities of oily sludge into a local river system. The smell was so offensive that many nearby residents were forced to sell their homes and get out. The clean-up cost the pipeline owner more than a billion dollars, making it the most expensive oil spill on land in US history. This book examines the causes of these two events. It argues that, although they were profoundly surprising to the companies concerned, from a broader perspective they were no surprise at all, stemming as they did from well-known human, organisational and regulatory failures. In particular, we emphasise two contrasting but equally flawed approaches to prevention of rare but catastrophic events. Fantasy planning Companies often try to convince themselves, regulators and members of the public that they have the relevant hazards under control because they have elaborate plans to deal with them. When it comes to the point, these plans turn out to be wildly optimistic and full of unjustified assumptions and inaccurate data. Their function is symbolic rather than instrumental - that is, they serve as statements that the hazard is under control, rather than as real instruments of control. Fantasy planning was very evident in both accidents. Black swans The second approach adopts the currently fashionable "black swan" metaphor. In Europe, historically, all swans are white, and Europeans could not conceive of a black swan - until they discovered Australia. In the 21st century, the concept of a black swan has taken on new meaning - a rare event with major impact, quite unpredictable at the time, although possibly explicable in hindsight. Nowadays, major industrial accidents, such as the blowout in the Gulf of Mexico in 2010, are sometimes referred to as black swans. But here the analogy breaks down. Black swans were unforeseeable to Europeans. Major accidents are not unforeseeable to risk analysts. In fact, it is their responsibility to foresee them and to put in place barriers against them. Accidents occur when those barriers fail. The metaphor is therefore wrong. In fact, it seems to be nothing more than a contemporary version of the idea that major accidents are inevitable - the 'stuff happens' view of risk management. Integrity management These two concepts shed new light on why integrity management is so difficult to get right and also how it can be improved. We hope that those in positions of responsibility in companies that have responsibility for hazardous facilities will feel the need to scrutinise their own integrity management systems with these absurdities in mind. The major failings we have identified provide valuable lessons for all organisations that use risk assessments to manage and prioritise routine activities. **Nightmare Range** Feb 01 2020 "Limón, who was stationed in Korea for the Army, writes with empathy for the Korean people as well for the young GIs dropped into a foreign culture." —Boston Globe Twenty years ago, Martin Limón published his first mystery story featuring Sergeant George Sueño, a young Mexican American army detective stationed on the US 8th Army base in South Korea in the early 1970s, the heart of the Cold War. George and his investigating partner, the rowdy and short-fused Sergeant Ernie Bascom, are assigned cases in which the 8th Army has come into conflict with local Korean law enforcement--often incidents in which American soldiers, who are not known for being on their best behavior in their Asian host country, have committed a crime. George Sueño's job is partially to solve crimes, but mostly to cover top brass's backside and make sure the US Army doesn't look bad. Thoughtful, observant George, who is conversant in Korean, constantly faces difficult choices about whether to follow his orders or his conscience. Nine critically acclaimed novels later, Soho Crime is releasing a collection of Martin Limón's award-winning short stories featuring Sergeants Sueño and Bascom. The stories within have been published over the last twenty years in a variety of magazines, mostly in Alfred Hitchcock, but have never before been available in book form.
